DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Myers et al..

With regard to claims 1, 2, and 4, Myers et al (US 5,334,032) disclose a power supply switch comprising:

- a base body side connector (1) having a pin terminal (3);
- a movable body side connector (2) having a receptacle terminal (16);
- a terminal cover piece (6) urged by a resilient member (13).

With regard to claim 3, Myers et al disclose a flange a bottom surface the housing to position the resilient element.

With regard to claim 5, Myers et al disclose another flange (12).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sakuraoka et al.

With regard to claims 1 and 2, Sakuraoka et al (US 5,437,558) disclose a power supply switch comprising:

- a base body side connector (14) having a pin terminal (12);
- a movable body side connector (18) having a receptacle terminal (16);

Art Unit: 2833

a terminal cover piece (32).

Sakuraoka et al do not disclose that the terminal cover piece urged by a resilient member

Myer et al discloses the terminal cover piece (6) urged by a resilient member (13).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the Sakuraoka et al system with the resilient member, as taught by Myers et al, to enforce the connection of the pins and the receptacles and sliding the cover piece.

2. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Myers et al in view of the admitted prior art.

Myer et al disclose all of the limitations except for a resilient member at the end of the tab terminal.

The admitted prior art (Fig. 5) discloses a resilient member (60) at the end of the tab terminal.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the end of the tab terminal in Myers et al with the resilient member, as taught by the admitted prior art, to prevent dynamic impact during connection of the pins and the receptacles.
